

LTD | Liquid Threat Detect Test Kit

The SwabTek Liquid Threat Detect or Liquid Explosives Test Kit is a single-use spot-test designed for use in screening for EXPLOSIVES and EXPLOSIVES PRE-CURSORS in any liquid, cream, or gel sample. The Generation 2 version of this test was released in 2024 and replaces the Generation 1 version in SwabTek's catalog. The test consists of three separate phases, with each screening for the presumed presence of a different class of explosives and constituents:

Peroxides

Volatile Organics & Fuels

Acids/Bases

SwabTek's unique form-factor helps to ensure proper sample collection and reduces the user's risk of exposure during testing.
